

NN-2 Optimizer Variants - 9-bus (QPU, ibm_fez) **Each bar = one unique measured state, sorted by shot count, colored by feasibility**

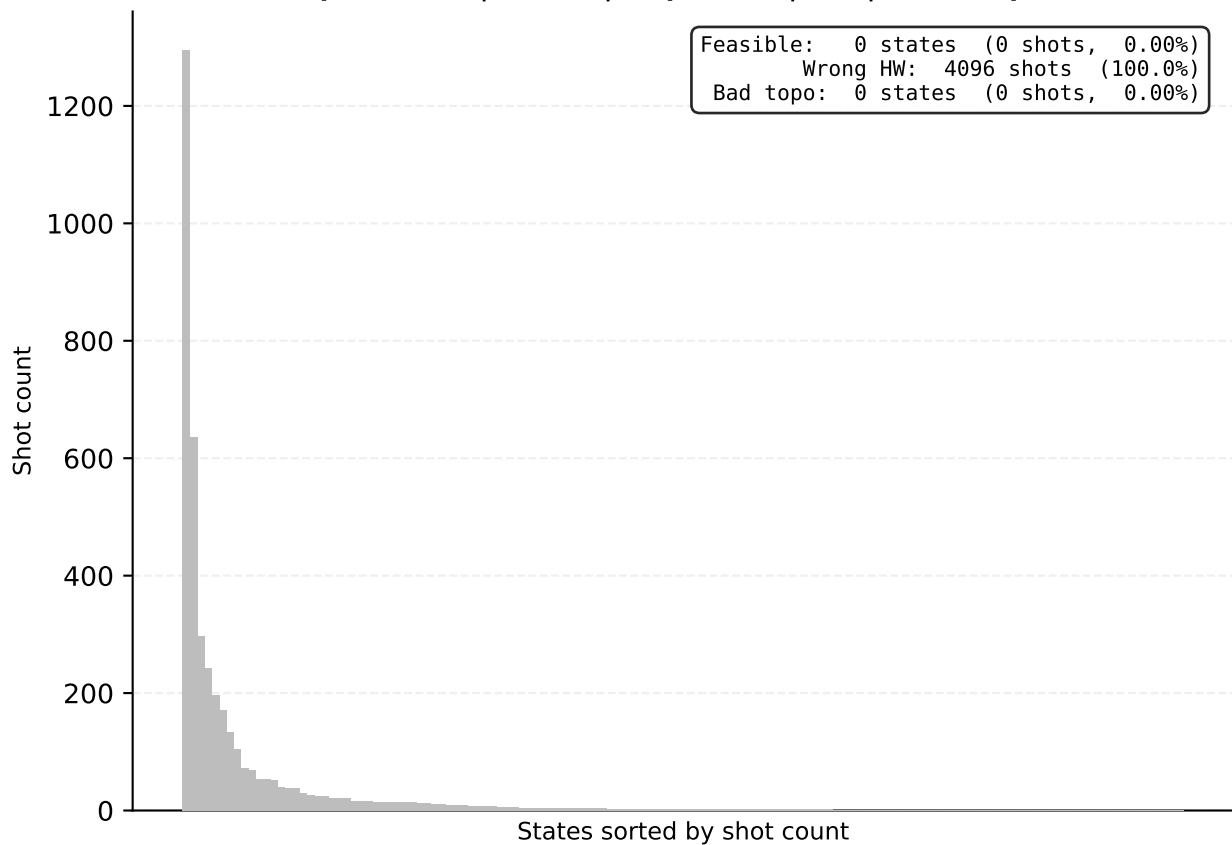

NN-2 AOA (qamomile) | 9-bus | depth=243 | 1L | 749 unique / 4096 shots

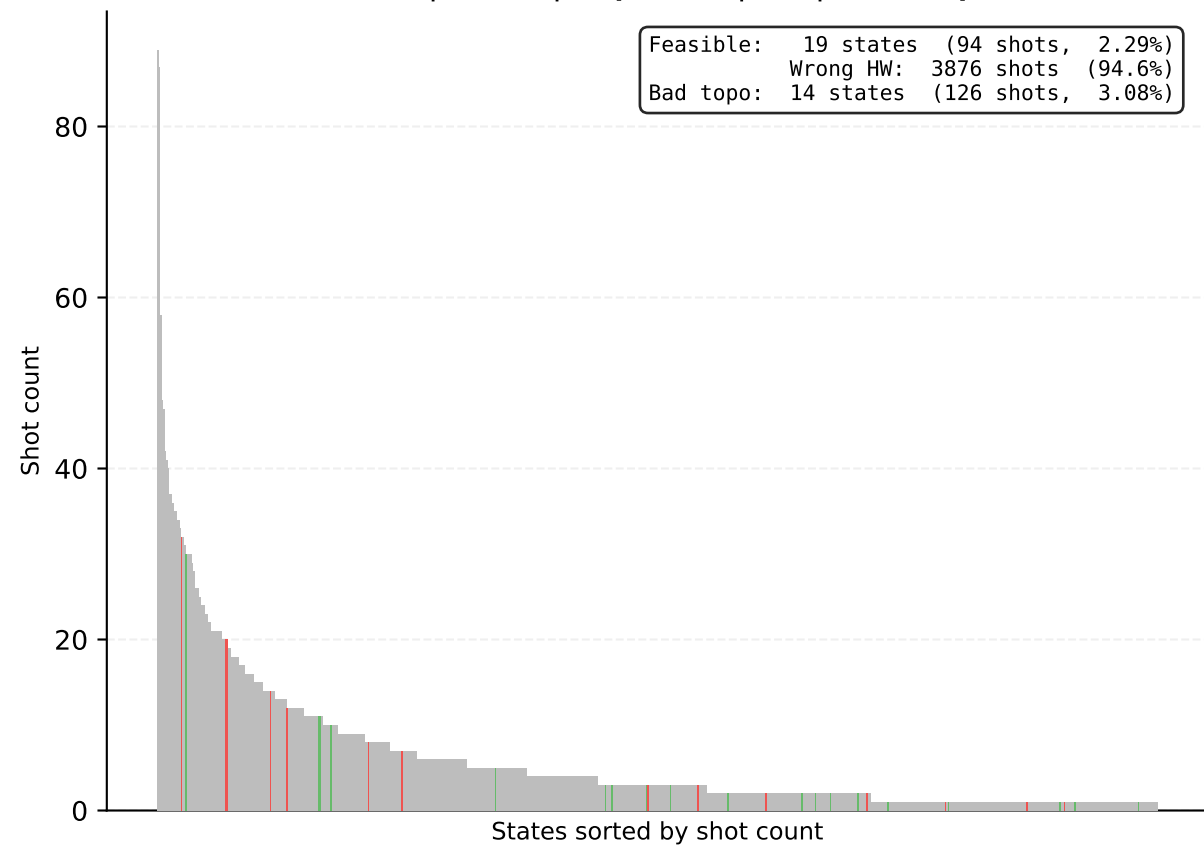

NN-2 AOA (native) | 9-bus | depth=1204 | 1L | 986 unique / 4096 shots

NN-2 QAOA (qamomile) | 9-bus | depth=13 | 1L | 137 unique / 4096 shots

NN-2 QAOA (native) | 9-bus | depth=28 | 1L | 663 unique / 4096 shots

■ Feasible (finite objective)
 ■ Correct # open switches, infeasible topology
 ■ Wrong number of open switches (QPU noise)
